Data accuracy for credit reporting

It's time to make your data fit for purpose. Data quality can be the foundational step to get the job done proactively. With Experian's solutions, you can make more out of your data while saving time and staying compliant.

Introducing: DataArc 360™, powered by Experian Aperture Data Studio. With a proactive reporting process and data quality control, you'll be able to get ahead of data errors when reporting to the Credit Reporting Agencies.

Credit reporting has several moving parts. If this sounds familiar, see how **Experian's DataArc 360™ can help you achieve an efficient operation**.

I need a **consolidated view of data across sources & processes**

- Leverage Metro 2® submission data to cross-reference against dispute data
- Easily upload data from eOscar
- Review disputes data to obtain insights on root-cause
- Connect to multiple data sources
- Standardize and transform data from those sources
- Profile data and fix errors

I want to be **alerted if the data we are processing doesn't conform to our expectations**

- Alerts and recipient can be determined and set
- Automatic emails can be triggered when a rule reaches a certain threshold
- Allows organizations to prioritize issues and resourcing

I want to **prevent further issues moving forward**

- Go from issue identification to issue resolution within a single platform
- Connect to various sources of data, including source systems, allow users to fix issues at their source

I want to **proactively assess the data furnished to the credit bureaus before submitting**

The only pre-submission review tool from Experian

*Pre-submission is available for furnishers that have the capabilities to do so

I want to **understand how I compare to my peer group and create better benchmarks**

- Benchmark against peers and assess your organization's data quality trends by monitoring 12 months of dispute data and one month of reported data (or 6 months of your own reported data).
- This data is delivered through Experian's Data Integrity Insights Dashboards

I want **maximum accuracy, efficiency, and compliance for all post-funding activities on consumer loans and lines of credit**

- Can help you execute a timely review and response to member credit report disputes and inquiries
- Can provide metric reports to measure, monitor, and improve efficiency

I want **non-technical users easily digesting and analyzing information**

- The UX is designed for non-technical users who typically do not create workflows but benefit from the execution of them.
- Non-technical users have better visibility into the output of a workflow
