**experian.**™

DataArc 360™

Your trusted source for **credit bureau reporting**

In a highly regulated environment, credit lenders want to better manage their risk tolerance and establish risk controls, especially when reporting to the national bureaus. As data furnishers, utilizing advanced technology can improve your account reporting processes, creating insights needed to reduce compliance risk, deliver successful regulatory exams and internal audits, and minimize customer complaints.

That's where Experian comes in

Experian's **DataArc 360™** powered by Aperture Data Studio is an agnostic platform that enables furnishers to ingest, assess, and correct their consumer data files prior to submitting to the bureaus, giving them a control tool to better manage overall risk.

Top features

- Data issue discovery
- Instant insight into your Metro 2 file
- Flexible deployment
- Pre-configured Metro 2 rules
- Generate insights via dashboards
- Automated data processes

Homepoint Financial **saved 50 hours per month** by automating data checks with DataArc 360

How it works

Multi-tenancy Hosted

Aperture Data Studio, the platform that powers DataArc 360, is available on the cloud, which helps you **see faster time to value by deploying within days** with no need to rely on in-house IT resources. This deployment is fully managed on the cloud and supported by Experian.

100+ pre-configured rules

One easy-to-read dashboard

Experian supports solution upgrades

On premise

The on premise solutions takes the full service platform in-house, allowing furnishers to **self-service data quality** with globally curated data sets and customize the platform to best fit their robust reporting processes.

130+ pre-configured rules

Several easy-to-read dashboards

Customizable rules and workflows

Benefits

Reduce the risk of fines and audits
We'll help you manage your data so that you can better adhere to regulatory requirements and Metro 2® standards.

Save your team time and resources
By checking that your furnished data conforms to reporting standards, you can save your team time and focus on mitigating operational risk.

Establish risk controls
Integrating risk control into your organization, you can proactively manage data errors to reduce risk of failed audits, regulatory fines, and customer complaints.

Promote a data-driven business
By establishing a data quality strategy with DataArc 360™, the net effects of quality information will benefit all aspects of your business, including credit risk, collections, fraud, and account management.
